

Sub query:

A query contains one more query (subquery or inner query)

Types:

1) Single row subquery - subquery returns only a single record

Id	Name	Dept	salary
101	Ram	It	55k
102	Sam	It	50k
103	Sanjay	Sales	42k
104	Ravi	Sales	40k
105	Jany	Hr	43k

Return the employee of the ram department

Main query (sub query) first sub query executes, the result is used by the main query

```
SELECT * FROM employee WHERE dept = (
```

```
    SELECT dept
```

```
    FROM employee
```

```
    WHERE name = 'Ram'
```

```
);
```

Single row operators: relational operators or comparison operators

2) Multi-row subquery - subquery returns only multiple records

Membership operator – in, (any, all) used with relational operators
